JONAH OWEN

CYBERSECURITY PROFESSIONAL

Email: j.blu006@gmail.com | Phone: (785) 304-5747 | LinkedIn | Github | Blog

EDUCATION

Johnson County Community College | Jan 2025 to Present
Associate of Information Technology with Cybersecurity Certificate, Overland Park

GPA: 4.0

EXPERIENCE

Student Support Technician, Johnson County Community College | Mar 2025 to Present

- Troubleshoot and resolve hardware, software, and networking issues in a high-volume support environment.
- Create and maintain technical documentation and knowledge-base articles.
- Achieved 78% First Contact Resolution rate, while maintaining 100% SLA compliance.

Red Team Researcher, Synack Red Team (Remote) | Dec 2025 to Present

- Discovered and disclosed high-severity vulnerabilities (CVSS 8.0+) in Fortune 500 environments.
- Deliver actionable remediation guidance that enables client mitigation within 20 days.
- Perform reconnaissance, web application testing, and vulnerability assessments in large-scale, mature enterprise systems.
- Selected as one of only 50 researchers to receive a limited rookie performance award based on early impact and contribution.

CERTIFICATIONS

- OSCP+ (2026-2029)
- HTB Certified Penetration Testing Specialist (CPTS) (2025)
- CompTIA Security+ (2025-2028)
- CompTIA Network+ (2024-2028)
- CompTIA A+ (2024-2028)
- OSWE (In progress, expected 2026)

PROJECTS

LightSail Honeypot (https://newo-j.github.io/blog/5-dollar-honeypot/)

- Built a cloud-based honeypot using AWS LightSail, Cowrie, a Docker container and Splunk HTTP Event Collector for monitoring.
- Conducted Malware Analysis on captured payloads, including a week-old XMRIG cryptominer and Mirai-variant botnets.
- Utilized VirusTotal and manual analysis to identify C2 infrastructure, Monero wallet keys, and persistence mechanisms.
- Developed a benchmark script in python to recursively improve honeypot realism by simulating the "pre-screening" environmental checks used by live malware droppers.

EvilMouse (https://newo-j.github.io/projects/evilmouse/):

- Engineered a covert HID keystroke-injector USB mouse using RP2040-Zero and custom firmware with CircuitPython.
- Project was featured in several cybersecurity publications including Cybersecurity News, Cyber Press and GBHackers News
- Open-source code received 39 stars on GitHub.

AnchorKit (AnchorKit.net) (In Progress):

- Open-source SDK establishing hardware-rooted photo provenance via Android Strongbox/TEE attestation, Ed25519 content signing, and Solana timestamping.
- written in Rust (Merkle builder library), Kotlin (Android SDK), and Python (Backend API), with a Solana smart contract for the on-chain layer.

SKILLS

Programming:
Proficient in: Python, JavaScript, Bash
Working Knowledge of: Java, SQL, Rust, Kotlin, Go
Defensive Security: Microsoft Defender XDR, Splunk, Microsoft Entra ID, Conditional Access Policies, Identity & Access Management, Privileged Access Management, Security Log Analysis
Security Engineering: Secure Code Review, API Security, Cryptography, Secure Tooling Development, Threat Modeling, Secrets Management, DDoS Mitigation, SDLC
Offensive Security & Research: Web pentesting, Network pentesting, Active Directory Attacks, Reverse Engineering, OSINT, Recon, C2
